## DETAILED ACTION

### *Pertinent Art Cited*

The following US Patent Applications reveal the current state of the art:

Meuris et al. (US 2002/0042698) teach of an electromagnetic field analyzer (10; Paragraph 2) comprising: dividing means (15) for dividing form data as an analysis object into coarse elements (Fig. 22b) and fine elements (Fig. 22c)(Paragraphs 340 and 353); forming means (15) for forming a matrix defining an electromagnetic field vector of the coarse elements divided by the dividing means related to an electromagnetic field vector of the fine elements (Paragraphs 222 and 226); and calculating means (15) for calculating an approximate solution of the electromagnetic field vector of the fine elements by applying an iteration method of simultaneous linear equations while referring to the matrix formed by the forming means (Paragraphs 126).

However, Meuris does not teach at least of an electromagnetic field analyzer, wherein when the length of a side  $l_i$  of the fine element is  $|l_i|$ , an interpolation function showing a relationship between the electromagnetic field at position  $x$  of the side  $l_i$  of the fine element and the electromagnetic field at a side  $j$  of the coarse element is  $N_j^C(x)$ , and the tangential vector of the side  $l_i$  of the fine element is  $t_i$ , the forming means forms a matrix  $P_{ij}$  by using the following expression:  $P_{ij} = 1/l_i \int_{l_i} N_j^C(x) t_i dl$ .

### *Allowable Subject Matter*

Claims 7, 10, 11, 14, 15 and 18 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for the allowance of claims 7, 11 and 15 is the inclusion of the limitation "wherein when the length of a side  $l_i$  of the fine element is  $|l_i|$ , an interpolation function showing a relationship between the electromagnetic field at position  $x$  of the side  $l_i$  of the fine element and the

Art Unit: 2863

electromagnetic field at a side  $j$  of the coarse element is  $N_j^C(x)$ , and the tangential vector of the side  $l_i$  of the fine element is  $t_i$ , the forming means forms a matrix  $P_{ij}$  by using the following expression:  $P_{ij} = 1/l_i \int_{l_i} N_j^C(x) t_i dl$ . The prior art of record, taken alone or in combination, fails to disclose or render obvious.

Claims 10, 14 and 18 are allowed due to their dependency on claims 7, 11 and 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
